FOREWORD

SOMETHING more than mere selfishness of purpose prompts the publication of this volume.

In answer to the demand of an awakening public interest, incident to the universal adaptability of marble, this printment has been compiled.

The advantages of marble generally, and of "Phenix Napoleon Gray" in particular, are illustrated in the following pages. Naturally, these advantages have their first application to the work of the architect and builder.

It is of more than passing interest to note that while the virtues of marble were recognized by the artisans of the pre-Christian era, it has remained for the architects and builders of today to aptly sense the almost limitless possibilities of this "Stone of Ages," as they severally apply to the many practical structural and decorative purposes not dreamed of in the long ago.

It is, therefore, the mission of this little volume to point out, mostly by pictorial presentation of existing work, the varied and adaptable possibilities of "Napoleon Gray Marble."

If we can but impress upon the mind of the reader a single salient thought, with regard to our product, we shall feel amply repaid for our effort. That one thought is the all-inclusive *adaptability* of "Napoleon Gray Marble."

Hastin Simpson

The Adaptability of Napoleon Gray Marble

FROM legendary times, marble has been used by man whenever he built for beauty and durability. This natural material, which owes its existence to those early and primitive forms of life which disappeared long before the advent of mankind himself upon the earth, was employed by the early Hindus, Greeks and Romans for their temples and tombs, their buildings of state and even for their dwellings. Many of the mediæval churches and, later, the splendid palaces of the Renaissance and the wonderful mosques and memorials of the land of the Taj Mahal were wrought of gleaming marble. Today, the nations of the world are perpetuating the memories of the World War in structures of this noble stone.

*An
Ancient
Stone*

Ranking next to the precious stones, the beauty of marble has always been appreciated. It possesses other qualities, however, which make it the noblest of building material. Its durability, its heat-resisting and weathering qualities, its crushing strength, its availability, its ease of cleaning, its light-radiation—all of these give to it outstanding advantages that inevitably attract the attention of the architect in his search for a medium that combines utility and charm—the two qualities necessary for universal adaptability.

*The
Qualities
of Marble*

There are, unfortunately, certain marbles which are only suitable for limited purposes; and these, when used outside their logical sphere, often prove disappointing. It is all the more striking, then, to be able to offer to the trade a marble such as Napoleon Gray—a marble so replete with possibilities and so

Napoleon Gray

An All-purpose Marble

fully measuring up to the standards established by the most critical, that it is rapidly finding a place in the specifications of buildings of every type and section.

This material is an all-purpose marble, adaptable to every use to which marble may be put, and in many instances superior to those other marbles which it has been customary in the past to specify for certain specific purposes. In color it is an exquisitely soft gray, rich in tone, pleasing in appearance, with enough variation to rest the eye and the mind—and therefore never becoming tiresome. The veining is such as to add character and matching qualities unobtainable in any monotone material.

It is practically non-absorbent, and therefore not only free from the possibility of staining or discoloration, but remarkably durable as an exterior marble. The effect of rain is that of a continual cleansing. Its high transverse and crushing strength makes it adaptable for use in conjunction with other materials and assures its permanency and wearing qualities.

Special Advantages

It is unusually sound in texture, a strong fault-free marble of great beauty, with just enough variation in color to make it popular as an interior finish. It can be carved to the most intricate patterns, and its

Napoleon Gray

adaptability for tracery, mouldings and finish affords an unlimited scope for architectural design and color value. As a floor tile it has proved highly satisfactory under the most severe tests for wear and structural value, and the non-slip quality affords security and safety under all conditions of use. For hospitals, where sanitation and cleanliness must be thoroughly considered, it is the ideal material.

It is used extensively in banks, for screens, floors and wainscoting; for corridors of office buildings, and lavatories and shower baths of every type; and for bases and counters in retail stores, lunch rooms and soda fountains. Normal discoloration and ordinary pencil writing on this class of work do not show because of the neutral gray color.

Napoleon Gray marble may be secured in sound large-sized blocks and slabs in any quantity and without delay. This makes it particularly desirable for wainscoting, toilet partitions and work of a character where economy must be considered. With many large stocks carried on hand in various sections of the country, the architect who specifies Napoleon Gray is assured prompt delivery in quantities sufficient to fill the largest contracts. The unusual uniformity in color,

Marble Contractors.

Napoleon Gray

veining and textures in all blocks produced, assures the buyer of his ability to secure a like material for any future extensions, repairs or additions. For the marble manufacturer it reduces waste to a minimum.

*Easily cut;
a Dielectric* Napoleon Gray is a free cutting, easy working marble, requiring minimum equipment — features that make it attractive to the small operator. It will receive a very high polish, with a consequent fine reflective value. The material is easily drilled, and the absence of sulphur, iron and other mineral matter in its composition makes it a dielectric of superior quality, and therefore very desirable for switchboard work.

*A Rich
Combina-
tion* Combined with brick, it furnishes a combination that is both attractive and economical. Many such brick structures, trimmed with Napoleon Gray, have been erected in all parts of the United States; and dwellings of "all-over" Napoleon Gray are to be seen in equally large numbers.

Napoleon Gray is the product of the Phenix Marble Company exclusively. No other quarries except those at Phenix in Greene County, Missouri, produce this material—and all of these Phenix quarries are owned by this one company. Both the name "Napoleon Gray" and the Diamond N () trade-mark are protected by Government Registration.

Napoleon Gray

The marble throughout the Greely Arcade Building in New York City is Napoleon Gray. George and Edward Blum, New York, Architects; Marble Contractor, Traitel Marble Co., Long Island City.

THE illustrations on the following eleven pages give a general idea of the effects achieved by the use of Napoleon Gray marble for

EXTERIORS.

Whether for residences, churches, commercial structures or municipal edifices, this material has found favor in every part of the United States.

The Growth of Napoleon Gray

*Organized
in 1890*

THE Phenix Marble Company, producers of Napoleon Gray marble, was organized in 1890, under the name of the Phenix Stone and Lime Company. For several years prior to the organization, the quarries at Phenix had been operated for the twofold purpose of manufacturing a high-grade white lime and for the production of dimension stone for exterior use. It developed later that the material being sold as Phenix Stone was, in reality, a high-grade marble, as shown by technical and chemical analyses. The name of the Company was therefore changed from the Phenix Stone and Lime Company to the Phenix Marble Company, under which name it has since been operating.

The name "Napoleon Gray Marble," which has been copyrighted, was given to the material because of its close similarity to the Napoleon Gray marble quarried in France.

*Output
Increases*

The reception of Napoleon Gray marble by the architects and fabricators was most encouraging and the output showed from year to year a healthy increase up to the time the United States entered the World War, at which time the difficulty in securing foreign marbles compelled the American manufacturers to look to American producers; and Napoleon Gray marble, with its beauty and adaptability, was immediately recognized.

*New
Equip-
ment*

The demand for the marble increased in volume so rapidly that development and equipment required the expenditure of large sums of money to keep pace with the demand and to supply the trade. The equip-

ment today is second to none in the United States—if, indeed, it is exceeded anywhere—and it can be truthfully said that no quarry organization has been more energetic and successful than the Phenix Marble Company in anticipating and preparing for the needs of its customers.

With the Phenix Marble Company are associated *Many Employees* a large number of technically trained men, experienced in the quarrying of marble, and they have developed in the foothills of the Ozarks an industry which employs 125 operatives, who, with their families, are the sole inhabitants of Phenix, Greene County, Missouri—a town with a population of 450 people. The energy and finances of the Phenix Marble Company have not alone been utilized in plant development and equipment work; the welfare of the employees has been looked after as well with a view to maintaining an organization of satisfied workers, thereby assuring better and more continuous production.

The Phenix Marble Company pursues the policy *Selling Policy* of producing Napoleon Gray marble in blocks, sawn slabs and floor tile only, for sale to the manufacturers, and does not compete against those who are buying and using the material. No manufacturing, other than making floor tile, is done at the quarry. Every small or large shop can figure on Napoleon Gray with the assurance of a just and fair competition.

Fourteen years ago the Phenix Marble Company *Only One Distributor* made a contractual connection with the Tompkins-Kiel Marble Company, of New York City, for the sale of its Napoleon Gray marble, believing this to be, from an economic standpoint, the best way to get results. The rapid increase in the volume of business has attested the fact that this confidence was rightly placed.

Napoleon Gray

Purpose of this Book The Phenix Marble Company and the Tompkins-Kiel Marble Company present in the foregoing pages a series of pictures, with notations, indicating the adaptability and uses of Napoleon Gray wherever a high-grade marble is required. It is impossible in the scope of this book to present photographs of all the work accomplished, and the selections are made to show representative jobs under the different classes indicated.

An Invitation The Phenix Marble Company invites those interested to visit its properties at Phenix, Missouri. You will be cordially welcomed, in the hope that such visits will enable the Company to understand better the requirements of the trade, and that the trade will be enabled to understand better the large operations involved.

A Decade of Success

The Founding IN the panic of 1907, T. D. Tompkins, son of Mr. E. B. Tompkins, New York City, President of R. C. Fisher & Company, and August Kiel, one of the foremost salesmen in the marble industry, founded Tompkins-Kiel Marble Company.

With general business at a standstill, with bankruptcy stalking everywhere, a more unpropitious time could hardly have been found for a young firm, without a yard and without stock, to start in business.

However, from the very beginning the Tompkins-Kiel Marble Company prospered because, first, they established broad policies, and second, because they knew the marble business from every angle. They had learned it in the hard school of experience.

Sales Policy One of the sales policies of this Company is to dispose of the quarry output to independent manufacturers, who own and operate finishing plants. In no way do they compete with them. How successful is this policy is best evidenced by the unprecedented sales of the Company. The sale of Napoleon Gray marble is a striking example. From a small concern, the sales impetus of the Tompkins-Kiel Marble Company has enabled the Phenix Marble Company to become one of the largest producers of marble in the country.

Exclusive Distributors The Phenix Marble Company has for years followed the policy of quarrying, sawing stone and marble, and finishing floor tile for the trade only. The Tompkins-Kiel Marble Company has been for fifteen years the exclusive distributors of Napoleon Gray marble in the territory lying east of the Mississippi River, for Canada and for the Pacific Coast.
